

Keyless Entry

Increase Safety and Improve Operational Efficiency

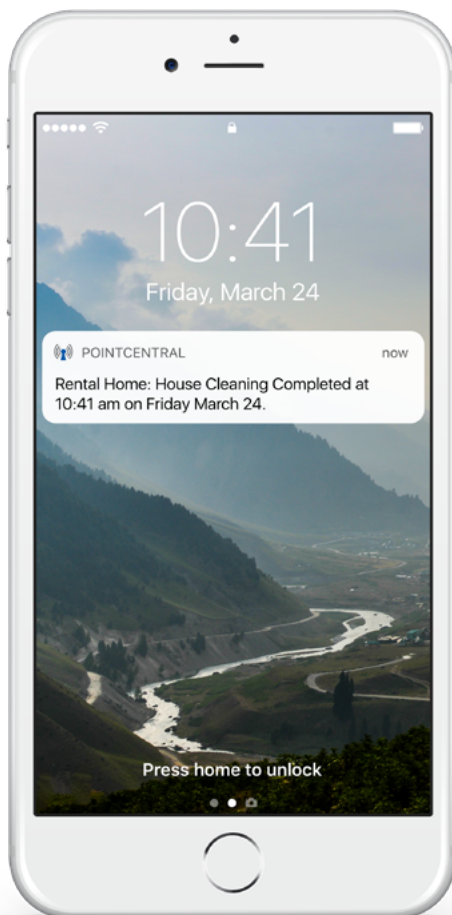

It's past time for vacation rental managers to eliminate keys, lockboxes, and floating codes. Owners and guests deserve a higher standard of safety and convenience. PointCentral has the solution.

With PointCentral, you can easily create and delete unique codes for each user from your desktop, or remotely using your mobile device.

Hotels have made keyless entry the standard. VRMs installing smart locks are giving guests the safety and convenience they expect while making their operations more efficient.

Both available in nickel or bronze finish

INTEGRATIONS

A unique code for each reservation is automatically generated through one of our 30+ PMS integrations. Codes automatically expire at the end of each reservation.

DIRECT-TO-HOUSE CHECK IN

Data show that modern guests prefer to skip check-in lines and go straight to the property to start their vacations. And there's no need to return a key when checking out.

STATUS NOTIFICATIONS

Simplify your turn day operations with automated notifications of guest check out, completion of cleaning, and completion of inspection!

HOUSE READY EARLY

Upon completion of inspection, automated notifications can be sent to the next guest letting them know the property is ready early and they can go straight to the unit to check in. Their code will automatically adjust to start working early as well.

AUDIT TRAIL

From your central dashboard, you will know who enters and leaves each property and when, thus greatly reducing your liability.

OPERATIONS

Revolutionize your turn days and reclaim precious time (and costly manhours) by eliminating the need to manage keys and service guests and vendors at your office.
