

Energy Management

Reduce costs and extend HVAC life at all your properties

By using smart thermostats, you can enjoy reduced energy costs, less wear and tear on your property's HVAC system, and save precious time on managing specific thermostat settings on-site.

Your homeowners will benefit from increased asset protection since HVAC units won't be over-worked by guests, and guests will enjoy arriving to a comfortable temperature no matter the time of year.

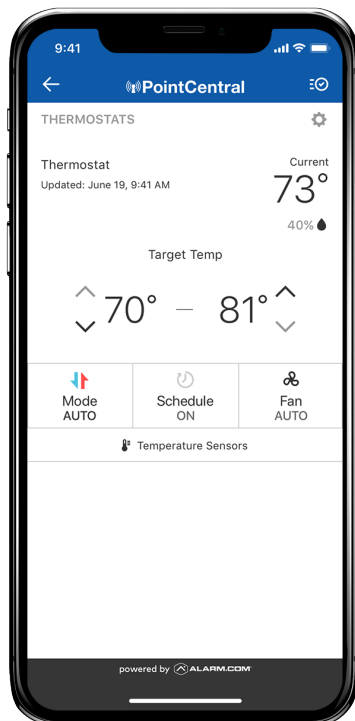

The PointCentral smart thermostat not only gives you the power to control your property's temperature settings from anywhere in the world, but it also allows you to save on utility bills:

- Save up to 16% energy usage in the winter
- Save up to 23% energy usage in the summer

PREVENT OVER-USAGE BY GUESTS

Set temperature range limits so your HVAC system isn't over-worked while occupied. And when a door or window is left open for longer than a few minutes, the HVAC will know to shut off.

SET TEMPS BASED ON OCCUPANCY

With automatic thermostat rules, your guests always arrive to a comfortable atmosphere year-round, and upon guest departure your thermostat knows to switch to energy-saving mode.

CONTROL HUMIDITY

Automatically adjust air conditioning when humidity levels exceed certain thresholds.

IDENTIFY HVAC ISSUES EARLY

Trained on real data collected from thousands of HVAC units, our system learns which HVAC behaviors to look for so when an issue occurs, it will automatically notify you so you can take action before a small problem becomes an expensive failure.
